RoboGolf (aka RoboPutting) – Robofest 2016 Game

12-2-2015 V1.1 (Kick-off version. Official Version will be available on Jan 8, 2016)

A. Game Synopsis

There are four green areas with a golf ball. The robot is to autonomously find each green area, locate a golf ball, and putt the ball into a hole by using a specific piece of wood (wooden putter). The center hole, “a” in Figure 1, has the highest points. The location of the four green areas will be unveiled at the competition site for junior teams. However, the exact location of the green area No. 4 will be completely unknown to senior teams. The exact location of the golf ball on the green paper will also be unveiled to teams at the competition.

At the World Championship on May 14, 2016 at LTU, there will be unknown task(s) that require program changes and/or additions. In addition, at the World Championship, teams must demonstrate the assembly of the robot arm with the wooden putter without any adult’s help.

B. Rules

1. 4 standard golf balls with numbers 1 ~ 4 marked by permanent marker will be used. Modification of the balls is not allowed.
2. 2 minutes are given per game round.
3. Starting location and robot orientation are unveiled before the work-time. The starting location will not be on green areas. It will not be between green areas 1~3 and the hole-slots. The front side of the robot is defined as the direction normal to the putter’s ball contact surface.
4. The robot can putt only one ball at a time. The ball may only be touched/hit/struck once and at the original location on the green.
5. Teams cannot touch the robot during the round.
6. There is no Home Base. The robot does not need to return to where it started.

C. Violations

If any of the following violations occur, the round ends. Scores earned before the end of a round are retained.
1. Human contact/touch with the official playing field materials
2. Human contact/touch with the robot at any point after the start
3. The robot *touches* the hole-structures
4. The robot falls off the table (any part of the robot is touching the floor)

**D. Invalid Putting occurs when:**
1. The ball moved, but was hit by the robot body, not by the wooden putter
2. The ball went into a hole, not by a single wooden putter hit (or strike)
3. The ball went into a hole, but was first moved by the robot body and then hit by the putter

If the above cases occur, the Judge must immediately announce “Invalid Putting” and record the ball number on the score sheet. The round continues, and the Judge leaves the ball where it lies either in the hole or on the table.

**E. Playing Field Setup**

The playing field is a 30”x72” (actual size is about 75 x 182 cm) plastic folding table that can be purchased at discount stores like Lowes. The recommended brand is “LifeTime”. The four corners of the table are rounded. The radius of the corner circle is 4cm ~ 7cm. The thickness of the table is about 4.5cm. The surface is light in color such as almond or gray; however, the exact size, color, brightness, and edge shape are unknown until the competition day. The table is placed on a dark colored floor. Figure 2 is a drawing of the playing field features with dimensions. Table 1 describes the playing field values and whether the values are announced or not. Note that all 4 balls will be at the same position on their green area.

Table 1: Important values for the playing field
F. Golf ball

Standard golf balls are used. The color of the balls may be white, but are unknown.

G. Green area

The size of the green area is 15cm x 22cm. The RGB value of the green color is (0, 120, 0). The possible 7 ball locations are marked with “+” signs. It will be scotch-taped on four corners. As a part of the challenge, teams must design their robots in order to not be caught by the uneven surface due to the un-flat papers. MS Word and PDF files for letter size papers are available on the web. White edges of the paper should be cut out. See Figure 3.

H. Wooden Putter

1x2 un-painted wood piece is used to make the wooden putter. Pine wood is recommended. Actual size is 1.9cm x 3.8cm x 28 cm. The wooden putter can be slightly modified (for example: drilled to make holes) as long as the above dimensions are not changed. The putter should be designed to hit the ball with wood part only. Only one putter shall be used for a robot. See Figure 4.
I. Hole-slots
Hole-slots are made of white foam boards. The Instructions to construct the slots in PDF are available. Legs of the slots will be under the table, which means the table has a slight increasing slope toward the holes. The inside dimensions of each hole-slot is 11x13 cm. The wall thickness is 0.5 cm. All the slots can be taped together and centered to the table. See Figure 5.

J. Robot Specifications (For both Junior and Senior Division)
1. Your robot may expand to putt the ball. However, it still must fit within a box with a 50 x 50 x 50 cm base when fully expanded.
2. Weight limitation: none
3. Any number of sensors/sensor types (unless it is harmful to humans)
4. Any number/type of motors/servo motors (multiplexor is OK to use)
5. Any material/robot kit may be used to construct your robot including tape, glue, bolts and nuts, rubber bands, etc.
6. A team ID tag on top of the robot is required.

K. Differences between Junior and Senior age divisions

<td>Unveiled.</td>
<td>Not unveiled at all. Robot must search for the green area No. 4.</td>
</tr>
<tr>
<td>Number of controllers</td>
<td>One</td>
<td>No limit</td>
</tr>
</tbody>
</table>

Table 2: Differences between Jr. and Sr. age divisions

L. Rules to Play Two Rounds and Determine Winners
1. Playing field configuration may be different for each round.
2. Teams will be given 30 minutes after unknown factors are unveiled to work on their robots. During this time, no adult (including parents and coach) is allowed in the pit.
3. All teams must submit their robot to the impound area when the 30 minute work-time is expired.
4. During the impounding process, judges will inspect robots. (size of the robot and the putter)
5. After impounding, the judges will reset green No. 4 location. (Senior division only)
6. The Emcee shall announce the following before each round: No adult is allowed in the pit area from now until all the robots are impounded. Student must stay in the pit area.
until their robot is impounded. The use of any communications devices to remotely control robots or communicate with players is prohibited in this competition arena. If anyone sees any suspicious activities, please notify the nearest volunteer immediately. You are welcome to take pictures or video, but please make sure your flash is off.

7. Only two contestants per team are allowed at the playing field during your run.
8. Teams will compete in a pre-determined order decided by the site host.
9. Entered scores shall be displayed to teams to check data input errors.
10. Winners in each age division will be decided by the average Final Score of the 2 rounds. Tie breakers will be: (1) best Final Score of two rounds, (2) rerun, if needed. At the World Championship on May 14, completion time may be used as another tie breaker, if necessary. Details about the World Championship tie breakers will be announced on the World Championship 2016 page.

M. Special Notes
1. Though every effort is made to be consistent and precise in all of the dimensions of the playing field and parts, Robofest assumes some error of up to ±0.3 cm.
2. If there are multiple playing fields at the competition sites, the Chief Game Judge will check consistency between the playing fields.
3. When the robot is searching for the hole-flag-panel using distance sensor(s), Judges should maintain at least 4 feet distance from the table.
4. Final decisions are at the discretion of the Chief Game Judge.

N. FAQs
1. What happens if the ball is putted before the 2 minutes end and enters into the hole after the 2 minutes end? It is valid.
2. What happens if a ball hits another ball? The game round continues and scoring is done at the end of the round.
3. What happens if a ball bounces out of the hole-slot after hitting another ball in the slot? Game continues and scoring is done at the end of the game. The slot has enough room for more than 4 balls.
4. The ball was putted and landed on another green area. Can the team get 5 points? Yes.
5. How to decide whether a ball is outside the green? It must be completely outside. See Figure below.
